

Candriam's Art.8 European Innovation & Optimum Quality Strategies

Transparency code

Statement of Engagement

Sustainable & Responsible Investment is an essential part of the strategic positioning and behavior of Candriam. We have been involved in SRI since 1996 and welcome the European SRI Transparency Code.

This is part of our tenth statement of commitment and covers the period 2022 onwards. Our full response to the European SRI Transparency Code can be accessed below and is available in the annual report of the retail funds and on our website.

Please note that we have also drafted Transparency codes for:

- Article 9 sustainable strategies.
- Strategies which invest in sustainable & responsible companies in emerging markets.
- European strategies, which invest in innovative & responsible companies in Europe.
- Other Equities, Bonds & Multi-Assets strategies classified as Article 8.
- Index strategies, which incorporate ESG criteria into their investment process, in accordance with a dedicated index management strategy.
- ETF strategies, which integrate ESG criteria into their investment processes.

The responses to the European SRI Transparency Codes for all the above-mentioned funds are available on our corporate website and our dedicated SRI website: <u>SRI Publications | Candriam.</u>

Compliance with the Transparency Code

Candriam is committed to transparency and we believe that we are as transparent as possible given the regulatory and competitive environments that exist in the countries in which we operate. Candriam meets the full recommendations of the European SRI Transparency Code.

2. General information about the fund management company

2.1. Name of the fund management company that manages the applicant fund(s)

The portfolio management company that manages the applicant funds is the following:

Candriam Serenity Bloc B 19-21 route d'Arlon L-8009 STRASSEN Luxemburg

Please consult our website for further information: www.candriam.com. This code applies to the following thematic strategies managed by Candriam: Circular Economy and Climate Action.

Any question regarding sustainable and responsible investment (SRI) at Candriam can be e-mailed to the following address: Contact | Candriam.

Our assets under management dedicated to ESG-related products have reached €103 billion which represent 74% of our total AUM, as of 30th December 2022.

2.2. What are the company's track record and principles when it comes to integrating SRI into its processes?

Sustainability is rooted in Candriam's operating model and forms a key part of our corporate culture. Our sustainable development strategy leads us to incorporate the overall trends that will shape the world of tomorrow when defining our strategic operational choices. This strategy aims to establish and maintain a balance between, on the one hand, responsible behaviour towards all stakeholders and, on the other, (a) the synergies between our SRI and traditional investment activities, and (b) the determination to run the company in consideration of the Environment and of Society.

Candriam has been managing Sustainable Investments since 1996. As a responsible asset manager for over two decades, we are committed to the continuous development of our long-standing and holistic Environmental, Social, and Governance analysis approaches, and to the on-going expansion of our large range of SRI investment products. All ESG processes, both active and indexed, are covered by publicly available transparency and methodology descriptions such as the Eurosif Transparency Codes.

To increase the visibility of sustainable investments to the financial community, we offer investors an SRI solution alongside the traditional investment process whenever possible. We increasingly integrate Environmental. Social, and Governance criteria into all our investment processes.

As a sustainable asset manager, Candriam recognizes the importance of taking into account sustainability risks and opportunities in the portfolios it manages and to duly consider sustainability impacts.

December 2023 - 5 -

Candriam a founding signatory since 2006 25 years track-record in Sustainable Investing

Milestones in Candriam's Environmental, Social, and Governance Investing:

1996 – First Sustainable Equity Fund. In 1996, Candriam's predecessor company, Cordius Asset Management, offered investors our first Sustainable Equity Fund.

2003 – Structured Proxy Voting System Established. Candriam was a pioneer among Belgian investment managers in exercising the voting rights of its clients to improve investment returns. In 2003 we began a systematic and structured proxy voting effort.

2005 – Proprietary Environmental, Social, and Governance research. In 2005, Candriam launched its in-house ESG analysis. Our ESG approach is based on a sophisticated set of ESG factors and performance indicators in six stakeholder domains, which is Investors, Employees, Environment, Suppliers, Customers, and Society, and are the core of Candriam's approach to Sustainable and Responsible investing.

2005 – Engagement Embedded in the Research Process. Our Engagement activities began at the outset of our in-house ESG research in 2005. Engagement arose from our dialogues with companies to obtain additional information. Our direct engagement with companies has grown organically over the years; for Candriam, Dialogue is synonymous with ESG Research.

2006 – Founding Signatory of the UN Principles for Responsible Investing. Candriam was present at the birth of the PRI. Candriam has been participating in industry working groups and sustainable investing organisations since 2003.

2008 – Emerging Markets ESG Investing. We believe that analysing ESG issues in Emerging Markets requires a different approach to accommodate the lower levels of information and transparency, as well as lower levels of issuer and investor experience with ESG factors.

2009 – ESG country framework established. Our analysis of sovereign and related issuers, based on the four pillars of Human Capital, Natural Capital, Social Capital, and Economic Capital.

2010 – ESG Indexed Funds – In 2010, following the controversial armaments exclusions firm-wide, Candriam decided to apply its SRI screening to its indexed fund range

2016 – Engagement: from Initiation to Influence. In 2016, we significantly increased our commitment by dedicating a group of our experienced Sustainable Investing professionals to full-time coordination of our decade-long efforts. Currently, we are putting our Engagement efforts behind three 'Conviction Topics': Corruption, Energy Transition, and Well-Being at Work.

2017 – Responsible Investing in Emerging Market Debt and High Yield Debt. In 2017, our expansion of our ESG included SRI Bond Emerging Markets, and SRI Bond Global High Yield. Five

December 2023 - 6 -

Candriam SRI funds were awarded AFNOR Certifications by the French-government-backed organization, making our High Yield fund the first to receive an SRI label.

2017 – Helping to Train the Next Generation of Responsible Investors – In October 2017, Candriam launched the Academy for Sustainable and Responsible Investing. The Candriam Academy aims to raise awareness, promote education, and improve knowledge of sustainable investing via an innovative and accredited online educational platform.

2018 – Launch of Fossil Free funds. Launch in September 2018 of two Candriam Fossil Free funds to support investors moving towards carbon neutrality.

2018 – Exclusion of Thermal Coal and Tobacco from all investments. In 2018, all Candriam strategies divested from companies with more than 10% of their activities in thermal coal, and from any companies which initiate new thermal coal projects, based both on stranded asset and sustainability considerations. Candriam also divested from any companies with more than 5% of their activities stemming from tobacco. These exclusions demonstrate our commitment to both investment performance and responsibility.

2019 – Launch of Climate Action strategy. Launched in May 2019, the fund invests in companies providing tangible solutions in terms of mitigation and adaptation to Climate Change.

2020 – Launch of Circular Economy strategy. Launched in April 2020, the strategy invests in companies providing solutions/services in the advancement of a more sustainable economic model.

2020 and beyond – Holistic Integration of Sustainability in Finance. In 2020 and beyond, we plan to continue to innovate and develop new sustainable investment solutions, as well as to increasingly integrate ESG risks and opportunities in all our investments, drawing on our more than two decades of experience in sustainable investing.

2021 – Joining the Net Zero Asset Manager Initiative. Candriam Announced on the 1st November 2021 advanced decarbonisation ambition and joins the Net Zero Asset Managers Initiative with the aim to secure a 50% reduction in greenhouse gas emissions across a significant share of its investment portfolio by 2030 and will pursue net zero emissions of its investment portfolio by 2050 or sooner.

2.3. How does the company formalise its sustainable investment process?

We have actively incorporated ESG analysis in our investing since 1996.

At Candriam, we believe that a company's long-term value is not purely measurable by purely financial metrics. By evaluating ESG criteria, investors can identify additional factors which affect a company's long-term value.

ESG considerations are central to Candriam's investment philosophy. To this end, Candriam's company-wide controversial activities policy integrates ESG factors including exclusions on controversial weapons, thermal coal and tobacco.

The policy is applicable to all funds for which Candriam has the full discretion as management company and investment manager. Except if otherwise agreed between the relevant parties, the following portfolios are therefore excluded from the scope of this policy:

- Funds for which Candriam is the Management Company but has delegated the investment management activity to another entity.
- Funds for which Candriam is not the Management Company but has received the investment management activity through a delegation by another entity.
- Fund of Funds managed by Candriam where the underlying funds are not managed by Candriam.

For third-party discretionary portfolio mandates, company-wide exclusions are applied if parties so agree. For additional information, please find Company-Wide Exclusion Policy published on our website:

Exclusion Policy | Candriam

December 2023 - 7 -

In addition to publishing our Transparency Codes, Candriam formalises its responsible investment process through publishing its Sustainability Risk Policy, followed by its Engagement and Proxy Voting Policies:

Sustainability Risk Management Policy | Candriam

Engagement Policy | Candriam

Proxy Voting Policy | Candriam

Integration of Sustainable Practices at Candriam - Sustainability is embedded in Candriam's business model and forms an essential part of our culture. We are committed to incorporating the global trends that will shape tomorrow's world in our strategic business choices and our daily life. We balance responsible behaviour towards our stakeholders with the synergies between our ESG and traditional financial investment activities, as well as with our role in environmental and societal stewardship.

We offer transparency through our annual review of our own internal Environmental, Social, and Governance practices, and the results are published in our annual Corporate Sustainability Report (CSR). Candriam's CSR lists our concrete achievements and our 'deliverables' in our commitment to develop our own company responsibly. The latest version is available on our corporate website at www.candriam.com.

Commitment at all levels is essential. Our Group Strategic Committee regularly assesses our relevant sustainability challenges to determine how Candriam should manage our stakeholder relations and how we should attune our business model and practices to all of these long-term challenges.

In 2020, we further clarified the firm's sustainability governance:

- A Strategic Sustainability Committee: supported by Candriam's ESG and CSR experts, meet regularly to sets out the strategic orientations for both ESG investing (both product and commercial wise) and CSR.
- A company-wide Sustainability Risk Committee: reports to the GSC, and assesses
 corporate reputational & financial risks regarding sustainability including climate risks and
 defines a controversial Company and Country Watch list for all Candriam's activities.
- The Proxy Voting Committee: furnishes strategic guidance on Proxy Voting best practices and monitor Candriam's voting policy.
- The Candriam Institute for Sustainable Development: oversees Candriam's Philanthropy and community-impact program, through the support of initiatives in ESG Research & Education and in the Social Impact domain.
- **The ESG Steering**: coordinates the implementation of the strategic ESG Roadmap, relying on several agile investments, operational and IT workstreams.
- **The CSR Steering**: oversees and coordinates the implementation of the CSR Roadmap across the axes of Staff, Clients, Operational Value Chain, Governance and Community.

As an investment manager, we strive to integrate ESG across all processes, offering the best services and products in ESG Investing. As a company, we commit to upholding the highest sustainability standards in every dimension of our business and we believe that our new ESG Governance Framework will allow us to so in a more efficient manner.

2.4. How are ESG risks and opportunities – including those linked to climate change – understood/taken into account by company?

Candriam considers that a company's long-term value is not solely influenced by financial criteria such as income or growth in the operating margin. By incorporating environmental, social and governance (ESG) criteria, we identify other factors liable to influence a company's value and competitiveness over the medium and long term. Within the analysis of Environmental factors, we take into account a company's exposure and strategy in terms of Climate Change.

December 2023 - 8 -

The inclusion of ESG factors rounds out the assessment of risks incurred by issuers. These risks can be broken down into four categories:

- **Operational risk**: risk of losses stemming from a failure or inadequacy in an institution's procedures, staff, internal systems or due to external events.
- **Reputational risk**: risk of loss in enterprise value stemming from the materialisation of a risk, affecting the perception of the company held by its clients, shareholders, counterparties, regulators or investors.
- **Strategic risk**: risk of losses stemming from an actual or potential risk, affecting capital and profit, and resulting from changes in business model or adverse commercial decisions, a lack of responsiveness to a market development, or the inappropriate implementation of decisions.
- **Financial risk**: risks arising from banking and financial activities, predominantly including foreign exchange, interest rate and liquidity risks.

More specifically, climate change is a source of financial and reputational risk for investors. There are two types of climate risks: physical risks and risks associated with a transition to a low-carbon economy.

Physical risks

Physical risks cover immediate material and financial aspects, as well as operational aspects (e.g. production halts, water scarcity) and reputational aspects (e.g. conflicts with local populations, major migratory flows).

Transition risks

Searching for solutions to climate change issues can generate risks and opportunities for some sectors/companies. In particular, these risks cover:

- Changes in prices of energy resources and energy efficiency, with the added drawback of leaving companies with stranded assets:
 - Reduction of renewable energy costs, and increase in supply of renewable energies, have driven down demand for the highest-polluting energies (with coal in the lead).
 - Reserves of the highest-polluting energies may end up never being used, forcing the owners to write them off.
- Changes in anti-pollution tax systems and more restrictive carbon markets, driving up prices of CO2 per metric ton.
- Financing risk for companies active in high-polluting sectors or involved with obsolete energy activities:
 - This risk has arisen due to the growing preference of clients and other stakeholders for energy transition financing and associated risks.

Types of risks

	Risks	Operational	Reputational	Strategic	Financial
Climate risk	Physical risks	✓	✓		
	Transition risks - asset value			✓	
	Transition risks - legal and market constraints	✓		✓	✓
	Transition risks - financing/funding		✓		✓

Candriam decided to exclude companies on a firm-wide level displaying more than 10% in thermal coal activities and those launching new projects in order to take into account potential stranded assets linked to climate change.

At Candriam, the inclusion of ESG criteria is the first step in the responsible investment process. Candriam's ESG analysis is designed to select those issuers that best manage the challenges related to sustainable development, including climate change and energy transition.

All these issuers form the ESG universe. The investment portfolios are then compiled from this ESG universe and in accordance with analysts' recommendations. This rigorous investment process ensures that short-, medium- and long-term ESG and financial risks and opportunities are taken into account and

December 2023 - 9 -

thus adds value to the investment as it enables the selection of issuers best positioned both from a financial point of view and from a sustainable-development point of view.

To help investors manage the risks associated with climate change and to take advantage of the opportunities presented by the transition to a low-carbon economy, Candriam offers investment solutions such as

- Excluding exposure to coal or the highest-polluting activities
- "Low-carbon" solutions
- Investment in green bonds
- Thematic Strategies, including Climate Change

These investment solutions are offered after reviewing the portfolio in terms of carbon footprint/exposure to fossil fuels and the portfolio's exposure profile in terms of energy mix with respect to the 2-degree global warming scenario. These solutions are developed in accordance with the financial risk/reward targets specific to the portfolio under analysis.

For more information, visit our website Climate Policy | Candriam.

Furthermore, as described in the previous section, Candriam has implemented a firm wide ESG governance structure to ensure proper oversight and information flow of ESG issues. Climate Risks are analysed by the Sustainability Risk Committee which assesses corporate reputational & financial risks. This committee reports directly into Candriam's Group Strategic Committee.

2.5. How many employees are directly involved in the company's sustainable investment activity?

Across our front office teams, there are approximately 60 employees that are major stakeholders and directly involved in the company's sustainable investment activity.

For more than 25 years now, the company has developed expertise in ESG analysis thanks to its dedicated ESG Team. The team comprises analysts who specialise in specific sectors, sovereign analysis and active engagement activities. The team has developed its own ESG analysis methodology applied to governments, corporations and supranational agencies/organisations.

For the majority of our SRI strategies (i.e. strategies based on our proprietary industry specific ESG materiality framework), the ESG analysts provide recommendations on issuers that determine the eligibility and, as a consequence, the ESG investment universe for the portfolio manager teams. The portfolio managers then apply their respective investment processes and select issuers from this ESG universe. For specific thematic strategies, the eligibility of issuers is determined in conjunction with the investment teams during dedicated committees.

Furthermore, an ESG Masterclass is organized on a regular basis to provide an extensive understanding of ESG related topics while educating our Portfolio Managers & Analysts to meet their sustainable investment objectives. This unique opportunity has been designed to provide not only training related to sustainability issues, but also information on new ESG developments and sector analysis developed by our dedicated ESG team.

December 2023 - 10 -

2.6. Is the company involved in any RI initiatives?

General Initiatives	Environmental/ Climate Initiatives	Social Initiatives	Governance Initiatives
□ ECCR − Ecumenical Council for Corporate Responsibility □ EFAMA RI WG □ European Commission's High-Level Expert Group on Sustainable Finance □ ICCR − Interfaith Center on Corporate Responsibility □ National Asset Manager Association (RI Group) □ PRI − Principles For Responsible Investment □ SIFs − Sustainable Investment Fora □ Other - Please refer to the section below for further information	□ CDP - Carbon □ Consultation □ Climate Change, and Water and Forest programmes) □ Climate Bond Initiative □ Green Bond Principles □ IIGCC - Institutional Investors Group on Climate Change □ Montreal Carbon pledge □ Paris Pledge for Action □ Portfolio Decarbonization Coalition □ Other: TCFD - Please refer to the section below for further information	□ Access to Medicine Foundation □ Access to Nutrition Foundation □ Accord on Fire and Building Safety in Bangladesh □ Other - Please refer to the section below for further information	□ ICGN - International Corporate Governance Network □ Other - Please refer to the section below for further information

As a responsible asset manager, the United Nations Principles for Responsible Investment are an important initiative to support.

We are proud to have been one of the first signatories to the UN-PRI. The PRIs are a voluntary initiative aimed at encouraging investors to include ESG (Environmental, Social & Governance) considerations in their investment decisions.

The most recent version of the PRI Report is available on the PRI website:

December 2023 - 16 -

2.7. What is the total number of SRI assets under the company's management?

Our assets under management dedicated to ESG-related products have reached €103 billion as of 30th December 2022.

2.8. What is the percentage of total SRI assets under the company's management?

Our assets under management dedicated to ESG-related products represent 74% of our total AUM, as of 30th December 2022.

2.9. Which are the SRI funds publicly managed by the company?

Transparency Code | Candriam

December 2023 - 17 -

3. General information about the SRI fund(s) that comes under the scope of the Code

3.1. What is (are) the fund(s) aiming to achieve by integrating ESG factors?

Candriam considers that a company's long-term value is not solely influenced by financial criteria such as income or growth in the operating margin. By incorporating environmental, social and governance (ESG) criteria, we identify other factors liable to influence a company's value and competitiveness over the medium and long term, which are not always immediately obvious in traditional financial analyses.

ESG integration is imperative as some of the sustainability challenges we face could test the resilience of financial and economic systems, whilst offering opportunities to foster innovation through our investments. This goes beyond environment and includes the social and governance dimension of corporate behaviour. Fully integrating ESG reflects our conviction that specific environmental, social and governance issues are being and/or will be priced in by financial markets participants through policy and/or societal change.

In this regard, financial metrics and accounting statements published by company are inherently backward looking and tell only part of the story. ESG analysis adds essential layers of information that capture the "intangible" aspects of a business not fully captured by traditional financial analysis. A growing share of companies' value is comprised of intangible risks and opportunities like brand, reputation, human capital and innovation. Sustainability affects those aspects directly and, as a consequence, makes it a relevant consideration within every investment strategy.

Due to the varying nature of each strategy's investment process, the specific objectives of each strategy will vary and are disclosed via the links under the section 2.9 of this transparency code.

3.2. What internal or external resources are used for ESG evaluation of the issuers who makes up the investment universe of the fund(s)?

The ESG Investments & Research Team has developed its own ESG methodology applied to governments, corporations and supranational agencies/organisations. The portfolio managers then apply their respective investment processes and select issuers from this ESG universe. The ESG Analysts use internal and external research to feed their models.

The Team strives to source information from diverse sources as we consider information from different providers to be complementary. This is as a result of providers' varying coverage, methodologies, as well as culture which may ultimately lead to discrepancies in views and final ratings. These different assessments enable our ESG analysts to have a more holistic view of a company.

Furthermore, we also source information from academic experts, sector federations, the media, and NGOs. Examples of NGOs used in analysis include:

- **Freedom House**: measure of freedom and democracy, understood via electoral process, political pluralism, functioning government, rule of law etc. (https://freedomhouse.org/)
- **Fraser Institute**: measure of human freedom, understood as the absence of coercive constraint (https://www.fraserinstitute.org/)
- Transparency International (CPI): measure of public sector corruption. (https://www.transparency.org/)
- Environmental Performance Index (EPI): ranks countries which are best addressing the environmental challenges that every nation faces.
- Paris Equity Check: assesses how fair are countries' climate pledges under the Paris Agreement.
- Ease of Doing Business Index: ranks countries on their ease of doing business.

Lastly, our ESG analysts obtain information from various International Organizations, which are either an integral part of the ESG Sovereign framework or serve as additional information in analysis. Examples of International organizations including the World Bank, the IMF, the World Health Organization, the UN Programme for the Environment, the International Labour Organisation, the United Nations Development Programme, the United Nations Organisation Food and Agriculture Organisation.

December 2023 - 19 -

3.3. What ESG criteria are taken into account by the fund(s)?

For the Equity Europe Innovation and Optimum strategies, we apply Candriam's ESG traditional analysis comprising a controversial activities and norms-based exclusion screening coupled with an assessment of a company's business activities and stakeholder management practices. We exclude companies that are exposed to specific controversial activities and that have breached the principles of the United Nations Global Compact as well as the 20% worst rated ESG companies from the European Universe analyzed using a Best-In-Universe philosophy.

We leverage from the scores of our ESG analysis and integrate them into our equity investment process and decisions in order to better assess the risks and opportunities. This ESG integration approach will impact the fundamental analysis of companies, valuation and ultimately impact the final portfolio construction.

For further information, please refer to question 4.1.

Candriam's products aim to have a long-term positive impacts on key sustainability objectives relating to environmental, social and governance challenges. To evaluate this, Candriam conducts an impact assessment for corporates, based on their "business activities", exposure and contribution to Key Sustainable Challenges (KSC) and the management of their stakeholders. For sovereign issues, we evaluate notably how environmentally efficient countries are in developing their Human, Social, and Economic Capitals.

In order to participate in sustainable objectives, Candriam's Article 8 products use an investment strategy that aims at reducing ESG risks as well as "Principle Adverse Impacts". To achieve this, the investment strategy employs a disciplined and comprehensive ESG framework. Candriam's proprietary ESG analytical framework for corporates and sovereigns sets clear requirements and minimum thresholds to identify the companies/countries that qualify as sustainable investments.

In accordance with Article 2(17) of the European Union's Sustainable Finance Disclosure Regulation (SFDR). Candriam defines a "sustainable investment" as:

- An economic activity that contributes to an environmental and/or social objective.
- Such investments "do not significantly harm" any other environmental and/or social objective while complying with minimum safeguards, and
- Following the good governance practices

Good governance assessment of investee companies forms an integral part of Candriam's article 8 financial products that promote environmental or social characteristics. In addition, whenever article 8 and/or article 9 products invest in an article 6 product, the good governance principle will also apply to all constituents of that specific Article 6 product.

Contribution to an environmental and/or social characteristic

Basic principles of ESG analysis for developed markets corporate issuers

We believe that all companies we invest in must display strong ESG practices. We exclude all companies that do not respect our company-wide exclusion policy and companies that have breached the principles of the United Nations Global Compact. This exclusion filter is coupled with an ESG assessment of companies by their ability to create value by integrating sustainability into their business activities and the interest of stakeholders within their operating and financial managerial processes.

Then, all portfolio managers monitor and take into account the sustainability information that they receive from the ESG team and integrate them into their investment processes and decisions in order to better assess the risks and opportunities for each issuer. This ESG integration approach will impact the fundamental and/or credit analysis of issuers, valuation and/or ultimately impact the final portfolio construction.

The ESG Universe is constructed using proprietary ESG framework comprising the following pillars:

 Controversial Activities: exclusion of companies involved in selected activities that do not embody sustainability.

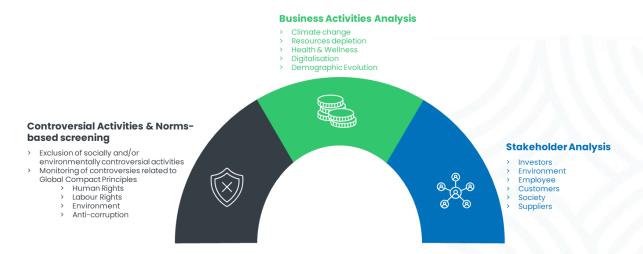

December 2023 - 20 -

- Norms-Based Analysis: companies that do not uphold the principles of the UN Global Compact are excluded.
- Business Activities Analysis: companies are exposed to major long-term ESG trends that
 can strongly influence the environment in which they operate and that may shape their future
 market challenges and long-term growth. We have identified five key sustainability trends:
 Climate Change, Resource Depletion, Health & Wellness, Demographic Evolution and
 Digitalisation.
- Stakeholders Analysis: We evaluate the extent to which each company incorporates the interests of six stakeholders in its long-term strategy: Investors, Employees, Suppliers, Customers. Society and Environment.
- **Engagement and Vote:** Engagement, through Dialogue, and Proxy Voting are central to our investment process in providing additional information on issuers and encouraging best practices.

For further information on our ESG approach, please refer to question 3.5.

Basic principles of ESG analysis for countries, i.e. public bond issuers such as public organisations and others

For sovereign issuers, portfolio managers monitor and consider the overall sustainability score of a country. The latter recognize how countries perform best across our four Capitals of sustainable development criteria: Natural, Human, Social and Economic Capital. These four capital domains incorporate a wide range of material ESG factors which the ESG team evaluate using our internally defined Key Performance Indicators (KPIs). This generates a dynamic capital-based analytical tree, which covers the sustainable development challenges and opportunities faced by each nation, a valuable source of information for portfolio managers.

December 2023 - 21 -

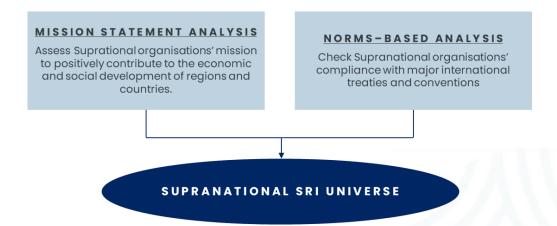

In addition, any country classified as Not Free by Freedom House is taking into account. Doing so, we aspire to set minimum standards of democracy, as well as avoiding countries that are involved in financing terrorism and money laundering.

Basic principles of ESG analysis for supranational organisations issuing bonds

In the interests of selecting supranational organisations with good ESG practices, Candriam has established a structured and rigorous 2-step ESG analysis procedure as shown in the diagram below:

The purpose of the **Mission Statement Analysis** is to exclusively select supranational organisations whose mission makes a positive contribution to the economic and social development of regions and countries. Most of today's supranational organisations meet this condition due to the very nature of their activities. In other words, the large majority successfully pass our screening process.

We also perform a **norms-based analysis** of supranational issuers. With respect to companies, the purpose of this analysis is to determine whether or not the supranational organisation observes the 10 principles of the United Nations Global Compact and, more specifically, the 4 main categories: Human Rights (HR), Labour (L), Environment (ENV) and Anti-Corruption (COR), as defined above.

This analysis aims to eliminate supranational organisations that significantly and repeatedly fail to observe any of the 10 basic principles.

Do Not Significantly Harm (DNSH):

The principle of "Do Not Significantly Harm" (DNSH) under the European Union's SFDR has key role ni the classification of sustainable activities and is linked to the consideration of the Principle Adverse Impacts (PAIs) and the alignment of the investments with the so-called "minimum safeguard". Candriam integrates the DNSH principle within its proprietary ESG research and analysis through the consideration of the PAIs which are central to our sustainable investment approach. You can find out more on the DNSH consideration on our SRI webpage:

SRI Publications | Candriam

Principle Adverse Impacts (PAIs):

Principle Adverse Impacts are defined as negative, material or likely to be material effects on sustainability factors that are caused, compounded by or directly linked to investment decisions and advice performed by the legal entity. Candriam considers principle adverse impacts of its investment decisions on sustainability factors as part of its investment due diligence process. We consider PAI at different steps of our ESG research and analysis process, through a wide range of methods and three approach from ESG ratings to negative screening and stewardship activities.

At portfolio level, Candriam considers the principal adverse impacts on sustainability factors occurs through one or several of the following means:

- Monitoring: evaluation and integration of PAIs in our proprietary ESG framework.
- **Exclusions**: ESG negative screening of corporate and sovereign issuers aim at avoiding investments in harmful activities and practices.

December 2023 - 22 -

• **Engagement & Voting**: to avoid and/or reduce adverse impacts on sustainability objectives, the financial product also considers adverse impacts in its interactions with companies, through dialogue and voting.

Please find our PAI Consideration at Product Level and our Principal Adverse Sustainability Impacts statement on our webpage:

SFDR Publication | Candriam

Principle Adverse Impacts (PAIs):

In addition, exclusionary screens, based on norms-based assessment and controversial activities analysis, ensure that minimum safeguards referring to international norms and conventions are in place and that activities that are harmful to environmental or social sustainability are excluded.

Good governance

good governance assessment of investee companies forms an integral part of Candriam's Article 9 financial products that have sustainable investment as their objective.

Our good governance assessment is based on our ESG Rating Methodology and comprises four pillars (as per the below). In this context, Candriam relies on its norms-based controversy analysis and its Stakeholders' Investor assessment. Investee companies are only eligible for investment if they pass all elements of this good governance screening/assessment. The four pillars are evaluated as follows:

- Sound management structure: assessed through Candriam's Norms-based Anticorruption/governance analysis and Candriam's Investor Stakeholder Analysis.
- Employee Relations: evaluated through Candriam's norms-based Labour Rights analysis.
- Remuneration of staff: analysed through the norms-based Anti-Corruption/Governance analysis.
- Tax Compliance: assessed through the Norms-based Anti-Corruption/Governance analysis.

In summary, investee companies that:

- Violates at least one of the four UN Global Compact Principles on Labour and/or the principle on Anti-corruption based on Candriam's norms-based Controversy Analysis are RED flagged, and, consequently not eligible for investment in Article 9 products.
- Have a score below 10 on the Investor pillar of the Candriam's Stakeholder analysis are not eligible for investment in Article 9 products.

Our norms-based analysis determines whether an issuer complies to the 10 Principles of the United Nations Global Compact ("UN GC") for each of the four themes: (1) Human Rights, (2) Labour Rights, (3) Environment, and (4) Anti-Corruption.

Candriam assesses any breach of international standards and principles through internal analysis, combined with, if available, external research. The "breach" analysis/assessment is performed by our ESG analysts and enables Candriam to offer a qualitative review of breaches/violations of those standards to fund managers and financial analysts.

Our analysis assesses the severity of the breach(es) through the following categories:

- Temporal proximity: when and how long?
- Magnitude: financial, environmental or social impact?
- Credibility: allegations or legal proceedings?
- Recurrence: one-off or repeated incidents?
- Reactivity: company's response?

December 2023 - 23 -

Based on such information and the evaluation framework described above, the following colour code is given to each of the four themes of the UNGC:

GREEN	No evidence of repeated or significant violations of the global compact Principles					
ORANGE	 Evidence of repeated violations of the global Compact Principles but these do not appear to be significant, or Evidence of significant violations of the Global Compact Principles but these do not appear to be repetitive, or Evidence of repeated and significant violations of the global Compact Principles, but the company has taken appropriate corrective measures/actions 					
RED	Evidence of repeated and significant violations of Global Compact Principles and the organizations has no appropriate response/behaviour.					

We consider that a company that takes positive and responsible measures to ensure the avoidance of future potential breaches is considered more favourably than a company that does not acknowledge its responsibility and/or does not take any corrective measures.

The purpose of Candriam's Stakeholder analysis is to assess the ability of an issuer to interact with its different stakeholders and incorporate it stakeholders' interests within its long-term strategy to prevent risks and seize potential opportunities. Candriam has defined 6 key stakeholders:

- Investors
- Employees
- Customers
- Suppliers
- Society
- Environment

The interactions of the investee companies with each of these stakeholders is then assessed through pillars composed of Key Performance Indicators ("KPIs"), as the below example demonstrates:

The Investors analysis assesses how an issuer manages its relationship with investors, through 6 pillars and 15 KPIs:

- Strategic Direction: independence Board of Directors, composition Board of Directors, expertise Board of Directors, Track record of the CEO and succession planning.
- Avoiding conflict of interest: audit committee independence, audit committee expertise, auditor's independence.
- Compensation: remuneration structure, CEO pay ratio evolution, other compensation elements
- Share capital: one share one vote and anti-takeover mechanisms.
- Financial conduct and transparency: fraud and financial misconduct investigations, auditor's opinion, tax evasion.
- ESG governance: Board & Management oversight of climate related risks & opportunities.

The scoring of investee companies are absolute (they are not made sector relative) and we consider the threshold of a sound management to be minimum 10 (out of 100), any issuer with a score below that threshold is excluded.

Candriam's Engagement and Voting activities in support of Candriam "Good Governance" assessment:

- We believe engagement is pivotal to a good governance and thus we conduct an annual pre-AGM (Annual General Meeting of shareholders) campaign. These dialogues focus on the composition and responsibility of the board, as well on the compensation policy of the target companies.
- The voting season is also the occasion to foster better corporate governance by voting against the management in case of misalignments with our own good governance definition. Apart from the dialogues and vote, we may also raise our voice on governance matters via questions and/or resolutions co-filing at AGMs. Pre-announcing our voting intentions is also a way to escalate our concerns or commend companies for improvement after respectively unsuccessful or

December 2023 - 24 -

successful engagement. We have formalized these pre-announcements since 2023 (Predeclaration of Voting Intentions | Candriam).

In summary, to be considered a sustainable investment:

- A company must be part of our eligible corporate universe. Our eligible corporate universe
 consists of those companies that have an ESG rating from ESG 1 to ESG 5 (up to ESG 6 for
 emerging markets and high yield universe) and pass the corporate exclusionary screens.
- A country must be part of our eligible sovereign universe. Our eligible sovereign universe
 consists of those countries that are not excluded by our in-depth negative sovereign screening
 and that are in the top 75% of countries by sovereign ranking.

3.4. What principles and criteria linked to climate change are taken into account in the Fund(s)?

Candriam believes investment opportunities and risks cannot be fully evaluated using traditional financial metrics alone. We believe that taking into account ESG criteria is a source of long-term value and risk mitigation that cannot be fully captured by traditional financial analysis. To this end, our ESG framework assesses the risks and opportunities to create value through integrating Business Activities and Stakeholder management sustainability factors within their operating and financial managerial processes.

The Business Activities Analysis evaluates the company's exposure (services/products, production areas, market segments, etc.) to the major sustainable development challenges. These challenges are long-term trends liable to considerably influence the economic environment in which companies operate and to determine the future challenges in the market as well as the long-term growth opportunities. Candriam has identified five major challenges including Climate Change.

The Stakeholder Analysis evaluates a company's ability to incorporate stakeholder interests in its long-term strategy, insofar as they are a source of risks and opportunities for the company. These six categories of stakeholders include Investors, Employees, Customers, Suppliers, Society, and the Environment.

To this end, we assess climate change risk and opportunities in both of our Business Activities and Stakeholder. In this top-down approach, we assess a company's business model exposure to climate change through the Business Activities analysis. Conversely, in the Stakeholder Analysis approach, we assess the way an organization operates to its natural surroundings to conduct its activities.

Please find below further information on the Climate Change and Environment assessments in the Business Activities Analysis and Stakeholder Analysis respectively:

Business Activities: Climate Change Challenge

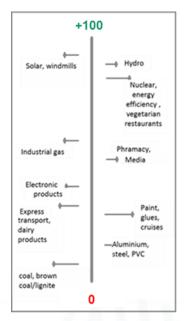

December 2023 - 25 -

Climate change is considered to be a major and substantial challenge in sustainable development. Accordingly, it is assessed in all sector models and is a major source of risk (thus attributed a lower score) for high-impact sectors such as energy, transport and materials. In the course of this assessment, the impact of various activities is estimated and factors in greenhouse gas emissions from the source to final consumption (i.e. Scopes 1, 2 and 3). Based on this estimate, the impacts for each activity are ranked, as described opposite, on a scale from 0 to 100. The measurement of the impact itself is based on the company's exposure, according to revenue earned by the activity, except for the energy and utilities sectors, where it is based on fossil fuel reserves and installed capacity, respectively.

Stakeholder Analysis: Management of Environmental Relations

Exposure to environmental management risks and opportunities is especially significant for high-impact sectors such as energy, materials, utilities, automotive and real estate. In the course of analysing environmental management, other issues such as air pollution are also covered, including energy use, biodiversity, soil use, waste and recycling, water consumption and the environmental impact of products.

Examples in the Energy sector:

- Implemented Strategies
 - Environmental impact of new projects before launch.
 - Projects in renewable energy, energy efficiency.
 - Variable pay granted to executive managers based on environmental performances.
 - Technologies and measures used to prevent leaks in oil pipelines (optic fibre cables to detect leaks, pressure monitoring).
- Performances
 - Energy mix and CO2 emissions
 - Oil leakage rate < sector average
 - Gas flaring rate < sector average
 - High % of Occupational Health and Safety Assessment (OHSAS) 45001-certified sites (for more information: https://www.iso.org/standard/63787.html)

Furthermore, we apply a norms-based and controversial activities filter to exclude companies which may represent high risk due to violation of international laws and non-sustainable activities. In the norms-based analysis, we determine whether companies respect the principles of the UN Global Compact, including the respect of Environmental norms.

We also believe that investing in companies significantly exposed to conventional and unconventional oil and gas activities is not compatible with the efforts towards an energy transition and represent financial risk in terms of stranded assets. To this end, we apply exclusion thresholds based on issuer revenues for these activities.

Finally, we aspire to have a lower portfolios' carbon emission in comparison to its relative benchmark.

December 2023 - 26 -

3.5. What is the ESG analysis and evaluation methodology of the fund manager/fund management company (how is the investment universe built, what rating scale is used etc.)?

Candriam's company-wide controversial activities policy integrates ESG factors including exclusions on controversial weapons, thermal coal, tobacco and for normative reasons.

We incorporate the results of the ESG Business Activities and Stakeholder analysis in the financial fundamental analysis.

The ESG Analysis is based on the following pillars:

- Company-wide exclusion
- Norms Based Analysis
- Business Activities Analysis
- Stakeholders Analysis
- ESG score

Controversial Activities Filter

A company's exposure to controversial activities is evaluated according to several parameters covering the following variables:

- **Type of involvement:** the type of involvement (direct or indirect) is taken into account for each company evaluated (owners and operators, manufacturers and producers, retailers and suppliers, product suppliers or providers of support services, etc.).
- **Degree of involvement:** this is based on an approach in terms of level of involvement and applied to all types of controversial activities. Production capacities or income stemming from such activities are generally used as key indicators.
- Responsible policy: in addition to the type and degree of involvement, it is important to look at how the company addresses and perceives its potentially controversial activities. Consequently, the presence (or absence) of an appropriate, targeted responsible policy is critical to the purpose of this analysis. This type of policy acknowledges the company's involvement in a controversial activity, but also the existence of systems and practices designed to ensure that the activity is carried out responsibly.

However, any companies exposed to the weapons industry are permanently excluded from the universe if:

- They are involved in the manufacture or sale of anti-personnel mines, cluster bombs, depleted uranium weapons and/or chemical, nuclear weapons, white phosphorus or biological weapons, regardless of the income generated.
- More than 3% of their revenues is generated from the manufacture or sale of conventional weapons.

The exclusion thresholds for exposure to other controversial activities are shown in the table below:

Level 2a Exclusions

Controversial armaments	 Any involvement in: anti-personnel landmines, cluster bombs, depleted uranium, chemical weapons, biological weapons, white phosphorus and nuclear weapon.
Thermal Coal	5% revenue thresholdCompanies developing new projects
Tobacco	 Production: any involvement Distribution: 5% revenue threshold
Conventional armaments	10% revenue threshold
Gambling	10% revenue threshold
Nuclear Power	• 30% revenue threshold¹
Electricity Generation	Companies with new coal or nuclear-based projects Carbon intensity above 354gCO2/kWh If earlier intensity data is not available No Paris cligned commitment.
	If carbon intensity data is not available No Paris-aligned commitment

December 2023 - 27 -

Oil & Gas	 Companies without new sustainable energy-based project Unconventional Oil & Gas 5% revenue threshold Companies developing new projects Conventional Oil & Gas Less than 40% of revenues derived from natural gas and renewable energy
Palm Oil	 Producers/Distributors that: are not RSPO² members and derive between 0% and 5% of their revenues from palm oil with less than 20% of this oil being RSPO-certified palm oil, and that have no deforestation policy; or are not RSPO members and derive more than 5% of their revenues from palm oil with less than 50% of this oil being RSPO-certified palm oil, and that have no deforestation policy. Buyers that:
	are not RSPO members and whose revenues are dependent on palm oil for more than 5%, with less than 50% of this oil being RSPO-certified palm oil, and that have no deforestation policy.
Mining	UN Guiding Principle, OECD

¹ Threshold applies regardless of carbon intensity.

For more information, please refer to these specific activities in Candriam's SRI Controversial Activities policy, which can be viewed on our website:

Exclusion Policy | Candriam

Norms-Based Analysis

Candriam has defined a list of companies presenting the most severe violations of the 10 UN Global Compact Principles and excluded from all article 8 strategies. The final decision is under the responsibility of the Sustainability Risk Committee which assesses and monitors sustainability risks for Candriam's investment activities.

Information regarding actual, suspected and/or related incidents or breaches of international standards are collected through external research combined with internal analyses performed by our ESG analysts.

After identifying any breaches of the Global Compact principles, the analysis uses several parameters to evaluate the severity and magnitude of the breaches:

- Temporal proximity: when did the incident happen and how long did it last?
- Magnitude: what financial costs and environmental damage are related to the incident?
- Credibility: does the incident involve allegations, legal proceedings?
- Recurrence: is this a one-off incident or is there proof of repeated incidents over a given period?

Emphasis is also placed on a company's response when an incident occurs. A company that takes positive, responsible measures to ensure that such a breach does not happen again is considered more favorably than a company that does not acknowledge its responsibility and/or does not take any corrective measures.

Based on this information and in accordance with the evaluation framework described above, the colour code is determined as follows for each of the four main categories.

Information regarding actual, suspected and/or related incidents or breaches of international standards are collected through external research combined with internal analyses performed by our ESG analysts. Based on this information and according to the evaluation framework described above, the colour code is determined as follows for each of the four main categories.

ORANGE
 Evidence of repeated violations of the global Compact Principles but these do not appear to be significant, or
 Evidence of significant violations of the Global Compact Principles but these do not appear to be repetitive, or
 Evidence of significant violations of the Global Compact Principles but these do not appear to be repetitive, or
 Evidence of repeated and significant violations of the global Compact Principles, but the company has taken appropriate corrective measures/actions
 Evidence of repeated and significant violations of Global Compact Principles and the organizations has no appropriate response/behaviour.

December 2023 - 28 -

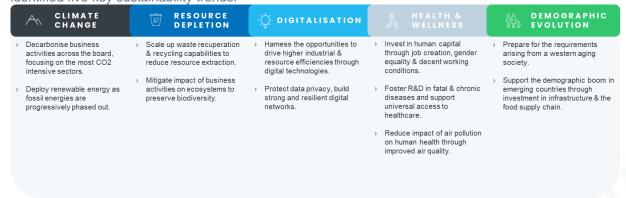

² RSPO: Roundtable on Sustainable Palm Oil

In order to successfully pass the norms-based analysis filter, issuers must not have been attributed a "red" in any of the four main categories of the United Nations Global Compact. Companies are subject to an ongoing control and continuous updates.

Business Activities Analysis

Companies are exposed to major long-term ESG trends that can strongly influence the environment in which they operate and that may shape their future market challenges and long-term growth. We have identified five key sustainability trends:

We group companies based on the industry or sector in which each company operates, its geographic location, business model. We determine the degree to which each industry group is exposed to the five major development challenges, and score them from 0 to +100.

We assess a company exposure, through its revenue generation, assets, CAPEX etc., to five key sustainable challenges: Climate Change, Resource Depletion, Health & Wellness, Demographic Evolution and Digitalisation.

For example, within the Mining sector, steel receives a more negative score on "Resources Depletion" than do metals of the platinum group; while within the Food sector, companies producing healthy products receive a more positive score than junk food.

For each company, the score is the weighted average of the five key sustainable challenges, ranging from 0 to +100. A lower score reflects the company's lower exposure to these major challenges.

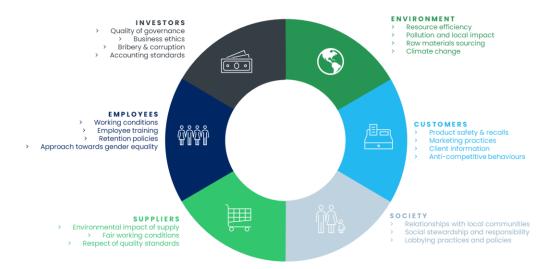

Stakeholder Analysis

Relationships with stakeholders give rise to opportunities as well as risks, and are therefore determinants of long-term value. We evaluate the extent to which each company incorporates the interests of stakeholders in its long-term strategy. We have identified six categories of stakeholders:

December 2023 - 29 -

We determine the relevance of each category based on qualitative and quantitative data. For instance, we may look at the degree of attention paid to shareholders; the frequency of certain events such as accidents and fines; the tangible or intangible financial impact of ESG issues, and the outlook and prospects for a company to improve or deteriorate in these measures. Based on the relevance, we determine weights for each category.

For example, in the energy sector, we place a strong weight on the Environment, in Financials for the banking sector; we place more emphasis on Investors. Within the broad categories, we also assign weight by materiality. For Energy, within the category of 'relations with employees', we stress health and safety; for Financials, within the category of 'relations for investors, we emphasize corporate governance.

For Financials we place special emphasis is given to governance in the stakeholder management analysis. Governance is one of the most important issues for financial institutions. We assess this aspect by analyzing the following:

- Board structure: Independence, expertise of directors, etc.
- Auditors' rotation (mitigates conflict of interest)
- Remuneration: is the remuneration aligned?
- Share capital (avoiding share dilution)

Furthermore, as part of our governance assessment, we incorporate the UNEP FI Principles. We verify if a bank is a signatory of the UNEP FI to assess its commitment towards the ESG issues. Although this is not a hard criterion for exclusion, we believe that banks that have committed to these principles are more prone to display stronger ESG practices.

A single category can be represented by different indicators, depending on their relevance to the sector in question. For example, the category "health and safety" of employees is primarily assessed by looking

December 2023 - 30 -

at safety conditions on oil platforms in the Energy sector, whereas, in the Software sector, it would be assessed by looking at workplace stress and ergonomics indicators.

For each theme addressed, the ESG analysis evaluates the strategies implemented by the company (relevance of the strategy developed, human and material resources allocated, pro-activity and follow-up) as well as the company's performances in each category relative to its competitors and the major trends in the sector.

The combination of this evaluation and the weightings for each category of stakeholder relations obtained from Stakeholder analysis give the overall Stakeholder score (weighted average of the six individual stakeholder relations scores) for each company. The company's score ranges from 0 to 100 and are calculated using a best-in-universe regional approach.

Engagement et Vote

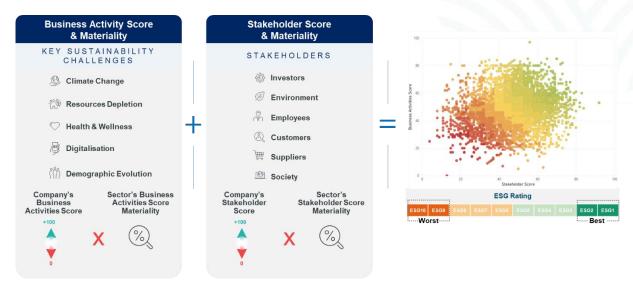

Stewardship is a key part of our long-term investment process, given its potential impact on investor returns. Candriam engages with the management of its investment candidates on a range of aspects. Stewardship takes the form of a direct and individual dialogue between ESG analysts and the representatives of the company and other stakeholders.

Candriam's voting policy favors resolutions that support sustainable development principles in accordance with its Sustainable and Responsible approach. As a pioneer in ESG, we also encourage sustainable development in the financial markets by sharing our expertise with customers, the media, and the broader financial community through conferences, working groups, and educational initiatives.

Eligible Universe and ESG score

The final ESG score of each issuer, which ranges from 0 to 100, is the combination of the Business Activities and the Stakeholders Analysis scores.

The eligible universe consists of issuers that have successfully passed our Norms-based Analysis and Controversial Activities filters and it excludes the worst 20% of the universe based on a regional best-in-universe philosophy.

To this end, following the controversial activities filter (activities in oppressive regimes, tobacco, thermal coal, (un)-conventional oil & gas, electricity generation), norms-based analysis (the 10 principles of the United Nations Global Compact) and ESG analysis (business activities and stakeholder analysis), the initial investment universe is reduced by at least 20%.

A more fundamental analysis, called "ESG Conviction", may supplement our ESG analysis which uses a more materiality-based approach. This analytical framework focuses on the most relevant ESG risks and opportunities to which issuers are exposed in order to select those best positioned in terms of sustainability. Issuers are scored against material KPIs to determine the final ESG score and eligibility.

December 2023 - 31 -

ESG Conviction analysis is applied as a complement to our current process to enrich certain fundamental and active ESG investment strategies.

Since the ESG Conviction framework uses a more in-depth building block to enrich our analysis, the resulting rating, from ESG1(best) to ESG10 (worst) will be the final ESG rating.

3.6. How often is the ESG evaluation of the issuers reviewed? How are any controversies managed?

Our ESG universe is updated on a monthly basis taking into account the latest data from external providers.

Each sector and country is periodically analysed by assessing the evolution of sustainability trends, as well as the relevance and materiality of each model or framework used.

The goal is to ensure that the models used by the analysts optimally reflect the sustainable development risks and opportunities affecting the sector in question. Companies are continuously monitored, and the sector is reviewed at least twice a year.

If there is a major event that may affect the rating assigned to a company (i.e. merger and acquisition, scandal, sustainability controversy etc.) or country (i.e. war, natural disaster, rebellion, etc.), the ESG analyst will launch an alert on the issuer.

There are several types of alerts that can be considered:

- SRI Monitoring Alert (for information only): This alert explains how the ESG team assessed the
 incident or controversy, even if there is no immediate change in the decision about the
 company's eligibility.
- SRI Alert: This alert means that the portfolio manager will no longer be able to add to his position in this issuer. The output of an SRI Alert can be:
 - An immediate change in the final decision on the company's eligibility criteria (from "eligible" for an SRI portfolio to "non-eligible"). In this case the portfolio manager must sell the position within a one-month period.
 - No immediate change in the final decision on the company's eligibility, but there is a high probability that there will be a change in the near future following the result of the analysis. No immediate selling is required. Within the following three months of the alert, the company will be reviewed according to the new information. A longer period for the revision is allowed when justified by objective reasons, such as, on-going dialogue with the company or awaiting the result of a lawsuit.

If an issuer is newly excluded due to the company-wide exclusion or norms-based filter, each portfolio manager has to sell the position within a period of one month. Depending on market conditions, rare exceptions may be granted by the CIO, RM & the Global Head of ESG Investments & Research in order to accommodate, for example, a potential liquidity issue.

For additional information, please refer to the Candriam Sustainability Risk Policy:

Sustainability Risk Management Policy | Candriam

December 2023 - 32 -

4. Investment Process

4.1. How are the results of the ESG research integrated into portfolio construction?

The ESG analysis is naturally embedded through each phase of the investment process including the portfolio construction process.

Candriam's ESG investment process is a two-step process that first of all calls for the definition of the eligible investment universe, followed by a financial selection which includes ESG considerations to select issuers within the eligible ESG universe. Any investment outside the ESG universe is prohibited.

The selection of ESG issuers is confirmed by the ESG team on a monthly basis, and on a one-off basis in exceptional circumstances.

When there is a change in the ESG universe and an issuer is excluded, the approach consists in excluding this issuer from the SRI portfolios within a period of one month. Depending on market conditions, rare exceptions may be granted by the CIO, RM & the Global Head of ESG Investments & Research in order to accommodate, for example, a potential liquidity issue.

The Risk Management department ensures that all securities in the portfolios comply with the ESG universe.

The financial selection of issuers from within this ESG universe is based on financial analysis and the optimal management of risks and opportunities of the portfolio.

ESG considerations are taken into account within the individual investment processes. Our ESG integration approach leverages on the frameworks and analysis conducted by the ESG Team. The analysis and views resulting from the ESG analysis are embedded in our financial frameworks. The consideration of ESG aspects in the financial framework will impact the final issuer score/color and valuation for our equity strategies. To this end, integrating ESG considerations will ultimately impact the construction of the final portfolio.

ESG Integration for Equity Strategies

At Candriam, we integrate ESG information and analysis into equity investment decisions in order to better assess the risks and opportunities that stem from the business activities and operations of companies. Respecting and preserving the distinct nature of each philosophy and approach across our range of investment processes, Candriam's fundamental equity investment strategies are impacted at each of the following levels: Fundamental Analysis, Valuation and Portfolio Construction.

Fundamental Analysis

Candriam's fundamental analysis is based on five pillars: Quality of Management, Business Growth, Competitive Advantage, Value Creation and Financial Leverage. Each of these pillars receives a colour/score that determines the final assessment of a company.

Candriam's fundamental equity strategies take into account the "Business Activities Analysis" and "Stakeholder Analysis" scores in fundamental analysis and "Company Valuation" as follows:

Quality of Management

In order to obtain a holistic view on the overall governance and soundness a company's management, we assess a company's relationships with several stakeholders by considering and integrating qualitative ESG information and quantitative ESG scores that result from the ESG stakeholder analysis.

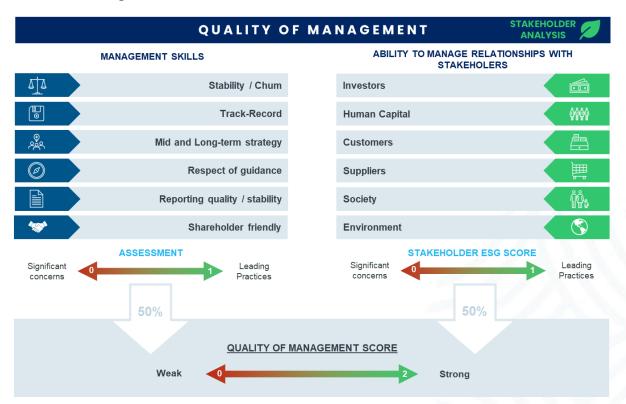

December 2023 - 33 -

Further to the assessment of strategy, stability, track record, corporate communication and other financial criteria, we assess the Management team on its relationships with its stakeholders.

The ESG Stakeholder analysis is taken into account in the Quality of Management assessment. If the company 'stakeholder' score belongs to the worst rated ESG companies, the 'Quality of Management score' cannot be 'green'.

Business Growth

In the assessment of business growth, the ESG Business Activities analysis of issuers is taken into account. Candriam has identified key long-term sustainability trends which strongly influence the environment in which companies operate and which influence their future market challenges and long-term growth and prosperity.

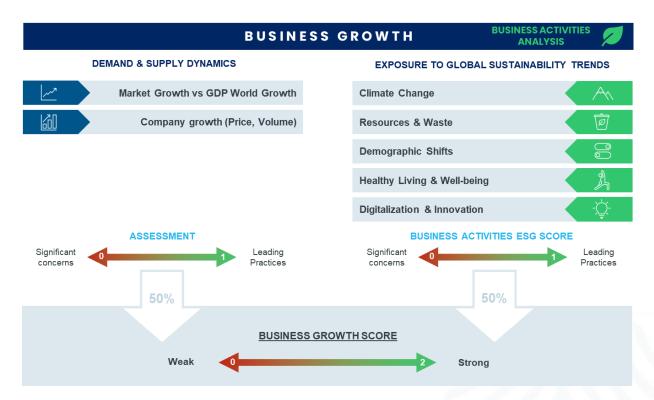

The five defined key Sustainability Trends illustrated above are analysed in order to assess the growth potential in conjunction with other key market drivers and regulatory risk.

More specifically, we consider the supply & demand dynamics as well as market drivers, the score resulting from the ESG Business Activities analysis, and potential regulation constraints to determine the overall score for the pillar.

December 2023 - 34 -

Competitive Advantage

We perform an intrinsic analysis of products and services, R&D, customer support, and other areas relevant to the company's business, including opportunities and risks resulting from sustainability regulation considerations.

We use the Porter concepts to analyse the competitive position of the company in its industry, such as the threat of new entrants, threat of substitutions, and the bargaining power of suppliers and customers. We check potential constraints resulting from sustainability regulation and assess their impact on the competitive advantage of the company, as well as risks and opportunities including barrier to entry.

For instance, given the ambitious climate objectives of many countries across the globe, there has been a strong emergence of regulations and legislations pertaining to emissions, pollution, amongst other environmental considerations. To this end, we expect companies that have business activities that positively contribute to those environmental objectives to outperform in the long run.

This analysis leads to a qualitative view which is taken into account in our overall assessment in this pillar.

Final Fundamental Assessment

For each criterion, companies receive one of the following scores or colors: 0/Red (weak), 1/Orange (medium) or 2 /Green (strong quality). All the five scores are then compiled in order to get a global score/colour grade of the companies which determine the "quality score" of a company: "High Quality" (Green), "Satisfying Quality" (Orange) and "Low Quality" (Red).

The ESG assessment is a contributing factor to determine the final colour/score of a company, which in turn will determine the weighting of this position in the final equity portfolio.

Company Valuation

We further evaluate the dynamics of their profitability and growth, the liquidity of the equity, and valuation. Our valuation is predominantly based on DCF models using at least five years of projected Free Cash Flow, based on our internal projections.

We adjust the discount rate based on the final score/colour of a company which takes into account ESG criteria. For example, for green companies, we reduce the discounting rate within our DCF. This modification has a significant impact on the DCF- valuation.

December 2023 - 35 -

Portfolio Construction

The portfolio construction process is mainly colour-based, bottom-up stock selection; weightings in the portfolio are function of the global colour of the companies. The sector weight deviations from the benchmark are not a strategic objective; they result from our convictions on individual stocks, with top-down sanity checks and other deviation boundaries.

The weight is significantly impacted by the colour grade (including the ESG score), and the upside potential derived through our valuation analysis (that takes the ESG score into account as well).

We favor companies that are 'green' in all aspects. An 'orange' company will have a lower weight and 'red' companies are in principle excluded, or extremely reduced, depending on the process.

4.2. How are criteria specific to climate change integrated into portfolio construction?

ESG factors are embedded in the financial process in order to better assess risks and opportunities. The results of the Business Activities analysis, which includes assessing exposure to climate change, are integrated in our financial framework. It will thus have an impact on the final fundamental color and our valuation exercise. Moreover, each investment strategy aspires to have a lower carbon emission in comparison to its relative benchmark.

For further information on ESG integration, please refer to question 4.1.

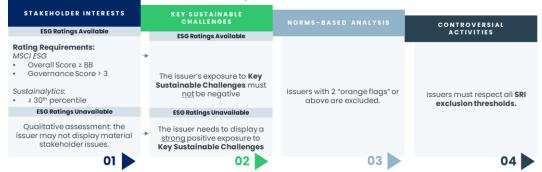

4.3. How are the issuers that are present in the portfolio, but not subject to ESG analysis evaluated (not including mutual funds)?

All issuers that are present in the portfolio are subject to an ESG assessment. However, due to specific events and market timing not all issuers may be subject to full ESG analysis to be eligible in the ESG universe.

Specific events (e.g. index additions, primary market issuances, etc.) may have an impact on the investment universe in between sector reviews. In order to address changes in this universe, the analyst applies a 'high-level' SRI screening methodology in anticipation of the next sector review. We refer to this screening as the SRI Express, it is applied in the same spirit of our proprietary ESG analysis with the only difference being that the result is a qualitative judgment for the inclusion or exclusion and is not a quantitative score. Each issuer will be assessed from a norms-based and controversial activities perspective. Additionally, the screening will exclude issuers that are exposed to the most negative business models in Candriam's Business Activities Analysis approach, and that are considered laggards in their practices towards stakeholders. Companies analysed through this methodology will be scored during the next sector review, which aims to reassess materiality weights and/or raw data coming from data providers, among others.

Express eligible issuer holdings must not exceed 10% of total portfolio weight.

Please find below an overview of the screening:

December 2023 - 36 -

4.4. Has the ESG evaluation or investment process changed in the last 12 months?

Our ESG evaluation or investment process has not changed in the last 12 months.

4.5. Is a part of the fund(s) invested in entities pursuing strong social goals/social enterprises?

Our strategies aim to outperform their respective benchmark on the following environmental, social and governance impact indicators (1, 2 and 3) and to avoid exposure to companies that do not comply with the United Nations Global Compact principles (4).

- Environmental: carbon emissions < benchmark.
- Social: % of women on the board of directors.
- Governance: % of independent board members.
- Human rights: % of companies that do not respect the 10 principles of the United Nations Global Compact = 0%.

Furthermore, the funds covered by this Code seek to invest in entities positively contributing to society. For example, in the Stakeholder analysis of "Society" in the Micro model assesses the impacts of organisations in the communities in which they operate and how they interact with local and global institutions including NGOs and governments. The analysis comprises two main pillars - Community Relations and Public Authority Relations - which take into consideration several themes including: socioeconomic relationships, site safety, access to products/services, lobbying and corruption. Together, these two pillars assess the overall impact of a company's operations on its local community and society at large.

In our framework, companies which demonstrate the pursuit of strong social goals benefit from a higher ESG score. Furthermore, in sectors in which societal interactions are key, we place a stronger emphasis on this aspect by overweighting these factors in the final ESG score.

4.6. Does (do) the fund(s) engage in securities lending activities?

Yes, the fund conducts securities lending. Please note that we vote on all issuers and recall securities if needed.

4.7. Does (do) the fund(s) use derivative instruments?

Pursuant to the Prospectus, the Europe Innovation strategy may use derivatives. However, the use of derivatives does not adversely impact the ESG quality of the fund.

Pursuant to the Prospectus, the Europe Optimum Quality strategy may use derivatives. The strategy purchases long-term put options and trade futures against European indices, typically for six months to two years. These purchases all aim to reduce the downside risks only. The netting of all put options and futures always provide a downside protection on an index. However, the use of derivatives does not adversely impact the ESG guality of the fund. Please refer to question 4.1.5.

4.8. Does (do) the fund(s) invest in mutual funds?

The strategies covered by this Transparency Code do not seek to actively invest in mutual funds.

December 2023 - 37 -

5. ESG Controls

5.1. What internal and/or external control mechanisms are in place to ensure compliance of the portfolio with the ESG rules on managing the fund(s) as defined in section 4?

Several departments are in charge of internal control: risk management, internal audit and compliance.

Each department is independent of the Fund Management Department and is placed directly under the authority of Candriam's Group Strategic Committee.

One of the tools used by this department is the constraints server, a tool that combines all the constraints and limits required to manage the investment funds. It contains regulatory and contractual constraints as well as internal limits and constraints used to prevent operational errors. Constraints are applied, for example, to the:

- ESG investment universe
- List of authorised investments
- Potential ratios (liquidity, dispersion) defined
- Main regulatory constraints applicable to the fund
- "List of credit warnings" and "list of equity warnings"

Once the constraints have been configured in the constraints' server, any order entered by the portfolio manager is immediately checked against them before the order is sent to the markets (ex-ante control). The portfolio manager is alerted in the event of a breach of constraint.

The Internal Audit Department carries out inspections and subsequently advises as necessary to ensure the performance and effective implementation of the internal control system in force. The inspection missions represent the lion's share of the audit department's work and aim to provide the Group Strategic Committee with an objective and independent assessment of a particular domain (function, process, system, ...).

6. Impact measures and ESG reporting

6.1. How is the ESG quality of the fund(s) assessed?

For developed markets corporate issuers, we measure the ESG quality of the fund is assessed through internally developed ESG scores which are measured against the fund's benchmark. We track the ESG quality using an overall ESG score as well as E, S and G scores, as illustrated below:

ESG Score - Companies (0-100)

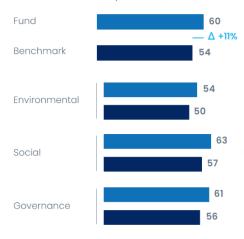

Image provided for illustrative purposes only.

6.2. What ESG indicators are used by the fund(s)?

Please find below examples of ESG indicators available for developed market corporate issuers:

- Carbon Footprint: Carbon Footprint Metrics of an investment portfolio refers to measurement of greenhouse gas (GHG) emissions by summing the proportional GHG emissions of the underlying holdings, proportional to the share of ownership. For further information on the carbon footprint, please refer to the Appendix.
- **Energy Mix**: The Energy Mix of a portfolio refers to the mix (percentage wise) of underlying energy sources used to generate electrical power by the underlying utility companies within a portfolio.
- **Women on Boards**: Asset weighted Percentage of Female Board Members at the companies held in portfolio.
- **Independent Board of Directors**: Asset weighted Percentage of Independent Board Members at the companies held in portfolio.
- Real Life Impacts: We aim to go beyond transparency by providing investors with a better
 understanding of impact indicators. We seek to bring these indicators to life in a more
 comprehensive manner for investors by providing real life examples of their contribution, as
 illustrated below:

Tons CO2eq per million € invested in fund/benchmark

• Emissions savings: The "Saving per 1 million € invested" indicator is based on the difference in Carbon Emissions between the Fund and the Reference Index. It compares this difference to the equivalent emissions from both commercial flights and family cars. For commercial flights, it is expressed in the number of return-flights from Brussels to New York in economy class. For

December 2023 - 39 -

family cars, it is expressed in the number of cars based on 13 000 km per year by cars emitting 120g CO2 per km on average (Source: Eurostat).

In the context of the French government's SRI label (section 6 of the SRI Label guidelines), please find below the results for each of the labelled strategies on the environmental, social, governance and human rights pillars:

Label ISR Indicators | Candriam

6.3. What communication resources are used to provide investors with information about the SRI management of the fund(s)?

The documents and information on our SRI funds address the ESG quality of the portfolio via:

- The fund's investment strategy.
- The selection of the biggest securities in the portfolio, as described in the fund report.

Details of the securities in the portfolio are also available on our corporate website, in dedicated product sheets, in the "Search for a Funds' section:

Candriam's funds are described on the corporate website via the fund-search engine:

Funds | Candriam

The Stewardship report incorporating Engagement and Proxy Voting reviews can be viewed on Candriam's website:

Annual Engagement & Voting Report | Candriam

Candriam's Corporate Social Responsibility Report, can be viewed at the following link:

CSR Report | Candriam

December 2023

For any request on research available to investors/savers or the breakdown of the securities in the portfolios, please use <u>Contact | Candriam</u>.

6.4. Does the fund management company publish the results of its voting and engagement policies?

Yes, the company publishes the results of its voting and engagement policies.

Please refer to question 6.3. for the links to our publications.

7. Appendix

Additional information – Carbon Footprint

tCO2-eq: Carbon dioxide (CO2) is the most common GHG emitted by human activities, in terms of the quantity released and the total impact on global warming. As a result the term "CO2" is sometimes used as a shorthand expression for all greenhouse gases. A portfolio's carbon footprint is measured in tons of carbon dioxide equivalent (tCO2-eq) which allows to bundle the various greenhouse gas emissions in a single number. For any quantity and type of greenhouse gas, CO2-eq signifies the amount of CO2 which would have the equivalent global warming impact. Scope 1, 2 and 3: The international GHG Protocol classifies a company's GHG emissions into three 'scopes':

- Scope 1 emissions are direct emissions from owned or controlled sources.
- Scope 2 emissions are indirect emissions from the generation of purchased energy.
- Scope 3 emissions are all indirect emissions (not included in scope 2) that occur in the value chain of the reporting company, including both upstream and downstream emissions.

All Carbon Footprint Metrics analysed in our reporting are based on both Scope 1 and Scope 2 data sourced from the specialist data-provider "Trucost". Good quality Scope 3 data currently does not exist because of the complexity to measure and control upstream and downstream value chain data. That also entails that so-called 'avoided emissions' are excluded from the Carbon Foot-printing analytics. Carbon Footprint Metrics: One can distinguish between four Carbon Footprint Metrics:

- (1) Total Carbon Emissions: measures the total GHG emissions of a portfolio in the most literal sense by summing all the GHG emissions of the underlying holdings, proportional to the share of ownership. The dependence of this measure to a portfolio's specific size makes this metric of limited usefulness for benchmarking and comparison purposes.
- **(2) (Normalized) Carbon Emissions:** measures the asset weighted carbon emissions of a portfolio normalized per million USD invested (expressed in tCO2-eq / million USD invested).
- (3) (Normalized) Carbon Intensity: measures the asset weighted carbon emissions of a portfolio normalized per million USD of revenue (expressed in tCO2-eq / million USD revenues). This metric provides an indication of the amount of GHG emitted by the holdings in a portfolio to generate 1 million USD of revenue.
- **(4) The Weighted Average Carbon Intensity (WACI):** is the sum product of the portfolio's holdings weights and Carbon Intensities, where holdings' Carbon Intensities are calculated as the company's total carbon emissions divided by the company's total revenues.
